

LAC 2026 — Dr.C Workshop Setup

macOS & Linux · branch lac-2026-csound7 · Csound 7 required

Install steps

1. Csound 7 — `csound --version` must show 7.x
2. Node.js 22 (+ Bun for Dr.C Terminal)
3. Get Dr.C — GitHub Releases (DMG / ApplImage) or git clone
4. Launch — Workshop-Attendee (free) or Standalone (instructor)
5. Verify — `cd DRC-Standalone && npm test`
6. Agent (optional) — Ollama local OR API key in Settings

macOS

- Csound 7 .pkg/.dmg !' ~/Applications/Csound/ · In -sf to ~/bin/csound
- Node 22 from nodejs.org (or Homebrew `node@22`)
- Double-click `launchers/*.command` (`chmod +x` if needed)
- Unsigned app: Right-click !' Open

Linux notes

- Ubuntu 22.04 apt `csound = 6.17` — build CS7 from source or use releases
- Node 22: deb.nodesource.com/setup_22.x
- `chmod +x launchers/*.sh scripts/*.sh`
- `./launchers/Dr.C-Workshop-Attendee.sh` or `Dr.C-Standalone.sh`
- Headless SSH: `npm test` works; GUI needs `DISPLAY`

Optional tools (recommended)

- CsoundQt 7 — Csound IDE (macOS DMG; Linux ApplImage)
- Cabbage — live plugin UI (macOS DMG)
- Audacity — listen/edit WAV exports
- Reaper — lightweight DAW host
